

# INFINITI Q60 DESIGN

The INFINITI Q60 has been 'designed to perform': its flowing sculptural lines and strong, muscular proportions project a sense of 'powerful elegance'. This is the anatomy of Q60 design.

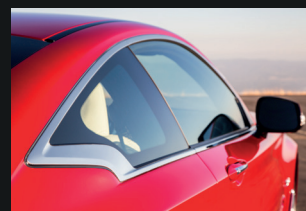

## DOUBLE-ARCH GRILLE

The Q60's double-arch grille exudes an immediate sense of power and purpose. Bigger than on previous models, the inset grille on the Q60 has been designed to serve as a mouth – feeding oxygen to the V6 twin-turbo engine.

## FOCUSED HUMAN EYE HEADLIGHT

LED headlights, employing 'light guide technology' to spread light evenly on the road ahead, are designed to emulate the shape of the human eye, providing an alluring 'face' to the car.

## CRESCENT CUT C-PILLAR

The crescent-cut C-pillars on the Q60 arc forward and emphasize the car's dynamic qualities, while accentuating the sweeping roofline – providing structure and beauty to the sports coupe design.

## ASYMMETRIC INTERIOR

The Q60 interior is asymmetrical, with a driver zone that is delineated by the instrument panel and center console – in line with INFINITI's fitted, personal approach to cabin architecture. Designers modelled the Q60's interior around the concept of a 'driver's glove' – the driver is always comfortable and the cabin is tailored for them.

## AERODYNAMIC DESIGN

Design elements that work aesthetically are also very important to the Q60's aerodynamic functionality and drag coefficient of 0.28cd. Vents fore and aft the front fenders direct air into and remove heat from the engine bay, while the sweeping roofline has also been shaped to reduce drag.

## DEEP BODY SCULPTING

From the Q60's bigger grille comes a strong, straight shoulder and sculpted body – adding lean muscularity and an organic quality that makes the sports coupe feel natural in its appearance. INFINITI design teams explored the limits of new stamping technology to create deeply-drawn panels and shape the dramatic surfacing on the Q60.
